

Bonded DSL Internet Connections

- Do you need more Internet or VPN bandwidth?
- Is your Internet or VPN reliable enough?
- Do you need better quality for your applications such as VOIP?
- Are your leased lines too expensive or have no resilience?

OciusB2 have the answer, Bonded DSL it's a new generation of DSL, offering full resilience, double, triple or quadruple increase on up and down load speeds and improved quality all, in one simple solution.

Reliable Internet service has become a basic yet crucial requirement for organisations and businesses. As usage of Internet applications increase, it is important to ensure service is not affected by insufficient or unreliable bandwidth. In addition to this you also need to ensure that bandwidth is used efficiently throughout your network.

Until Bonded DSL there was restricted upgrade paths and large financial steps to be taken if your business needed increased bandwidth and more reliability, the choices were traditional private leased lines, which are in the main expensive and inflexible. With no change to your network configuration we can offer your organisation the solution of bonding multiple connections together to increase your bandwidth and reliability and benefit from the following:

- High Internet Speed by combining multiple links together
- Connection Reliability, as failover is built in
- Reduced Internet connectivity costs
- Higher Internet image and sound quality
- Easy and quick installation options
- Efficient bandwidth management
- Deploy new offices quickly and cost effectively
- Increase additional bandwidth quickly

The Bonding service is intelligently designed to evolve and grow with future Internet developments. As Internet infrastructure, application usage and other related technology advances, our solution will continually develop and keep ahead of the market to effectively meet your needs.
